

Assembly Instructions Corvus Defensio Forward

Accessory Rail:

Dismount original Front Grip by pushing through the retainer pin. Take care not to lose the Front Grip spring while doing that (e. g. by wrapping around a plastic bag at the bottom of the grip).

Apply thread locker to the grub screws and tighten until they flush with the rail:

Attach the rail to the final mounting position on the barrel and insert the retaining bolt:

Alternately tighten the grub screws until the rail is firmly seated.

Note: When tightening the grub screws, pay attention to the alignment of the rail to the barrel. It should be parallel.
