

Assembly Instructions for Corvus Defensio Enhanced Release Button:

Remove original release button by opening and knocking out the bolt (bolt can be reused):

Insert original spring in the Corvus Defensio Enhanced Release Button and fix it with mounting pin (included). The short end of the spring must be in the Release Button.

Put the assembled (spring and included mounting pin) Enhanced Magazine Release Button into the AUG stock and knock in the bolt/screw (this motion pushes through the included mounting pin that holds the spring in place).

Apply thread locker on the bolt/screw.

Do not over-tighten the screw! Otherwise the Magazine Release Button can no longer be moved.
