

Installation guide for the adjustable charging handle from Corvus Defensio:

Tools: Hammer, threadlocker, piece of wood (or similar), drift 2,9mm, allen key Nr. 3, small screwdriver or allen key to attach the spring.

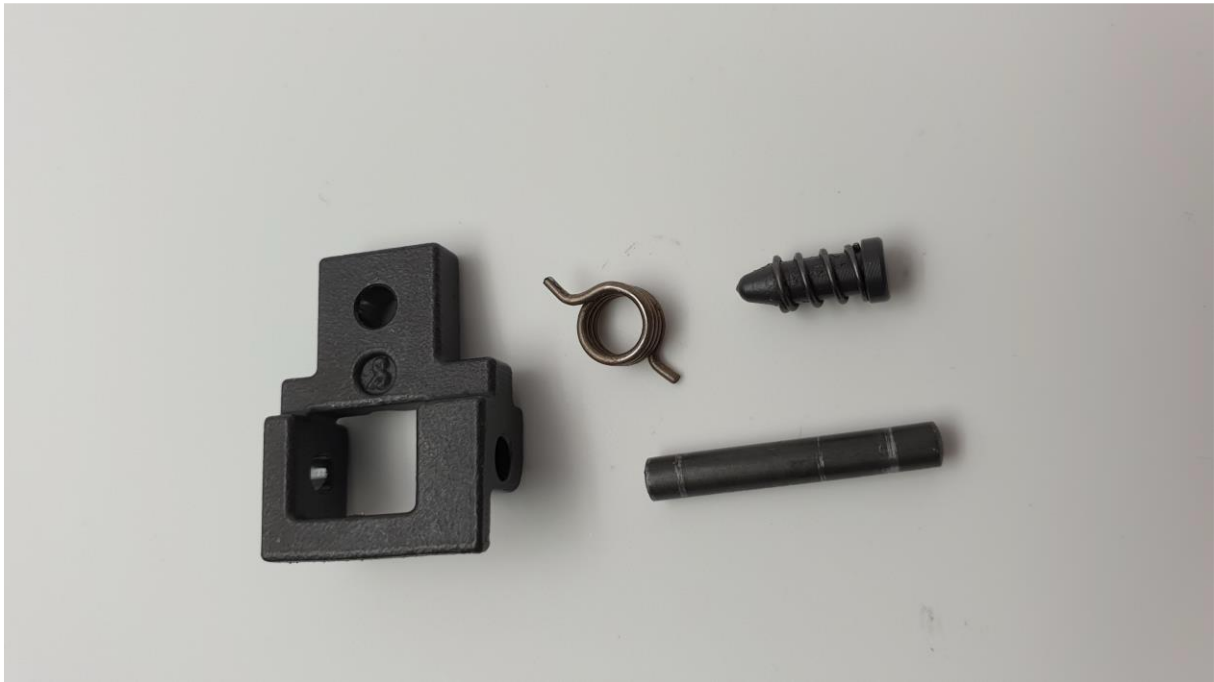

Assembly:

Place a piece of wood (or similar) between charging handle and receiver and remove the pin with hammer and drift carefully.

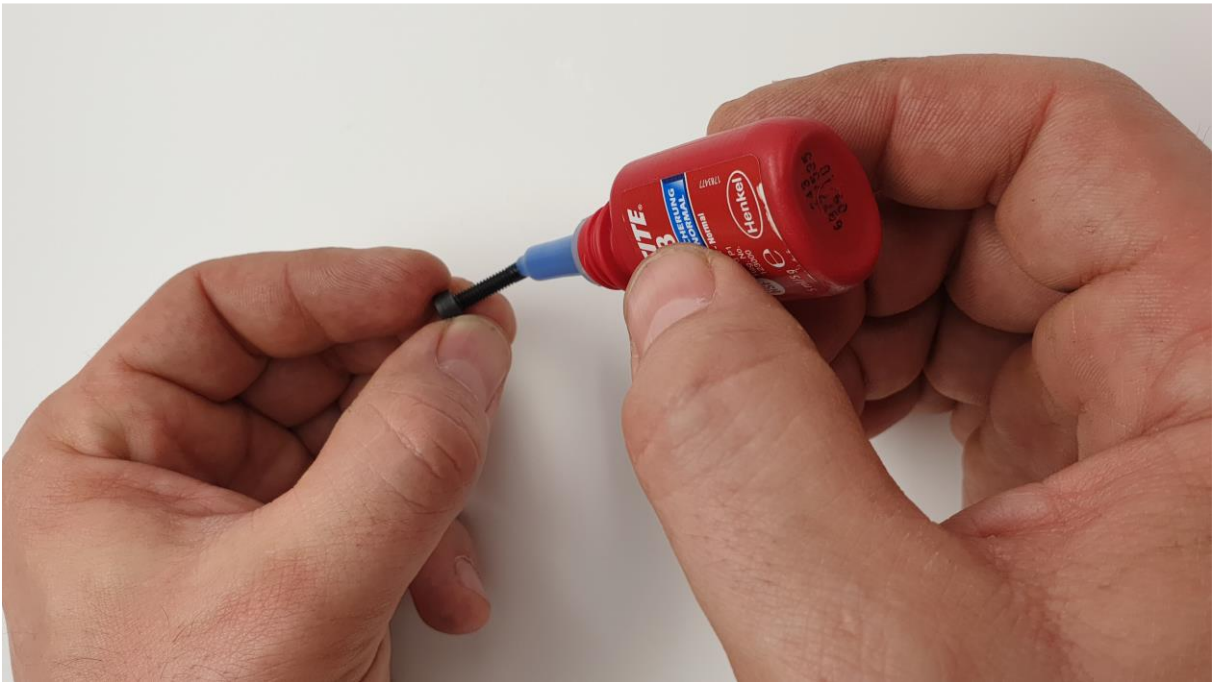

The plastic handle and all the other original parts will not be needed for the installation of the Corvus Defensio charging handle.

The adjustable charging handle will be mounted to the charging handle mount of the receiver.

Using threadlocker (medium) on the connecting screw is recommended.

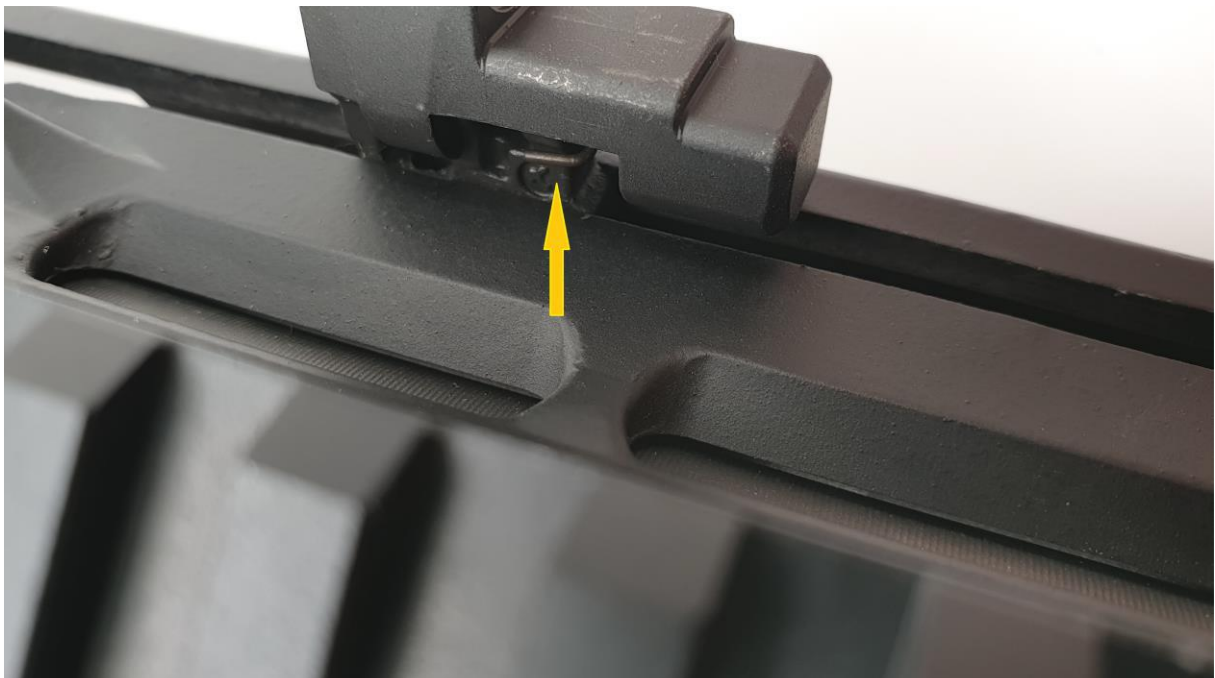

Place the pin in the base of the charging handle (no threadlocker here). Slide the spring on the pin. The part of the spring pointing to the side must be pushed into the slot of the base.

Slide the base with the pin onto the charging handle mount of the receiver.

Push/pull the other end of the spring over the charging handle mount of the receiver using the small screwdriver or allen key.

Place the cover and slide through the connecting screw.

Place the washer disc on the screw, adjust to the desired angle and tighten the screw.

The charging handle can be adjusted to any desired angle now.
